

Justin Kerobo

Dis-Function

for solo cello and electronics

Instrumentation

Violoncello and electronics

Program Notes

Dis-Function is an interactive solo cello composition with a multimedia component; the Audio-Visual Jitter Generator is made in MaxMSP.

The chaotic, frenetic energy and drive propel the thought and the journey further. An electronic visualization allows for free interpretation as the sound can manipulate a complex matrix of shapes according to sensitivity to sound. However, this piece can be played with or without the electronic visualization.

Duration

Approximately 4 minutes. (3'51)
